

Strong and Protective! We need your help! By: Rachael & José

Do you have experience being a bodyguard or a secret agent? Have you protected others and kept them safe until they reach a secure location? Are you sometimes mistaken for James Organelle Bond? If one of these things -or all of them- has happened to you, then this job is for you. We need a strong, athletic organelle with an ability to protect the inside of a plant cell, not an animal cell. To work for us you need to already have some experience being a bodyguard, be able to do straight-ups (give the plant structure), to do some hold-ups (protect the cell from getting crushed), and also do some divide-ups (which separate your cell from other ones).

This job is 24 hours a day, 7 days a week. Breaks can be taken in between, when oxygen and/or water is not entering the cell of course. For working with us, you will be paid with 3000 water particles a month. Also, extra effort will get you “Cellulose Points.” Cellulose points can be redeemed for more water particles or to increase your strength to give your cell better protection. Giving your cell better protection can be beneficial and might increase your monthly pay.

If you're not afraid of keeping others safe while risking your own life, and would like to meet famous chemical celebrities, such as oxygen and water, then don't hesitate any more. Come see us at Organelles 'R' Us, or contact us at 123-CELL-ROX. For more information visit our websites:

Job Opening in Cell : By Sam and Christie C.

Are you responsible? Did you ever want to be a window screen? Do you like protein? Do you provide shape to your cell? If so, this job is for you. This job requires hard work, 24/7. You also have to have some experience in the processes of diffusion and osmosis. If you don't know what these processes are then go to these websites www.cellsalive.com, www.biology.clc.us.edu, or www.tudsb.on.ca. You can also check out the Science Explorer text book for further reading. This job controls what comes in and out of the cell, forms barriers and is totally fun! For every minute you work your phospholipids off, you get a large amount of protein. If interested, please contact Cell 101 at 1234567890.

Help Wanted

By: Chistabel & Mitchell

Are you unemployed and green? Can you capture energy from the sunlight and use it to produce glucose sugar for a plant cell? Do you have your own DNA and can reproduce on your own? I'm sure you have a membrane and stacks of thylakoid called grana inside you! You must contain chlorophyll too. Let me guess, photosynthesis must be your best friend! Well guess what; replace me at my job starting from January 2009 to the end of your life because I hate photosynthesis and I quit! I guarantee good sunlight and a good environment for you in a plant cell. Come to Rose Bush Plant Cell Inc. and find C-Man or contact me at 1800-GREENLEAVES and email me at

$6\text{CO}_2 + 6\text{H}_2\text{O} \rightarrow \text{C}_6\text{H}_{12}\text{O}_6 + 6\text{O}_2$ @wackledoodle.com.

Help Wanted!

Are you clear, thick, 80% water and held together by a fatty membrane? Do you like constantly moving around? Can you keep people on task and help them work properly? If so, then you will want to come and work in a cell and move organelles around and hold them in place. For this job, you must contain proteins, vitamins, ions, nucleic acids, amino acids, sugars, carbohydrates and fatty acids. You must have experience holding together and supporting other organelles and you must be able to divide by Cytokinesis. This is a 24 hour job and you will not get any time off or vacation. You will not be allowed to retire, so you'll have to work till you die. If you are interested in this job, please contact the cell nucleus at cellnucleus@hotmail.com or call 8009-7878. Call ASAP before someone else gets the job.

By Courtney and Christie I.

Cells Part Wanted Ad

Do you like to transport substances? Do you want to detoxify things? Then this job will definitely fit you. The C&C Inc. is looking for a helper. You'll be a maze of passageways, stationed in the cytoplasm of a cell, between the nucleus and the cell membrane/cell wall. There will be two parts of you, nicknamed rough and smooth by its appearance. On the rough part of you, there will be protein-making organelles attached to you, so you can transport the protein they make to the Golgi body. In the other part of you, you will get a chance to detoxify substances in the cell. You must be working at this kind of job for at least 2 cell-years, and be familiar with working with protein-making organelles. For this job, you'll be paid by getting protection from the cell. If you're interested, please contact CandC@cells.com or call 10293847.

Packaging Employee Needed!

Are you organized and love wrapping and sending off packages of chemicals? Do you like to sort things out? If so, then this job is meant for you! The P&S Company is looking for a new employee who has had prior experience working with dangerous substances. You could be working in a building that looks like water-balloon-pancakes stacked on top of each other (your kids or friends would go crazy over it)! You'll get packages from the major post office of the 'city', package it into little blebs that are called lysosomes (they're like FLUBBER from the movie *Flubber*, except not green and they're not hyperactive), and send it to other parts of the city. Beware; if it's not packaged properly, the city will be doomed forever. We will pay you a longer life (and maybe some extra membrane) for every successful package. Please call 1-800-715-1279 or e-mail us at info@psilovecell.com for more details on this line of work, or go to www.psilovecell.com for the on-line application.

DongJae and James

Cell Cleanup crew needed

Urgent notice! We are short of assistant chefs and the chefs are having a very hard time doing everything alone. Is cooking your strong point? Then come and help our chefs! You will learn how to break down bigger food particles into smaller ones by putting digestive enzymes between the particle's chemical bonds and splitting it up. Also, recycling reusable things will become your habit after taking this job, since using dead cell organelles and releasing usable food is part of the job. The more exciting portion of this job is that you get to be the hero who duals the big bad bacteria that tries to penetrate the cell's defense and infect it. The only requirement for this job is, as mentioned above, is being able to manage over 3 dozen kinds of enzymes, to digest food particles and kill bacteria. Also, you have to be 0.1micron in size to be capable for this job. You will get awarded with free food, and the satisfaction of being able to provide the cell with extra food and defense. The job usually takes place in animal cells, but if you have a very specific reason to work in plant cells, you might get a job there. The job is very rare in plant cells, so you better have a good reason! The work shift is about 10 hours a day, with a lot of short breaks in between. Please contact 'Organelle Provider Inc.' by dialing 1234-5678. Thank you in advance, and we are 100% sure that you will come applying any second now!

A Cell Organelle Needed

By: Herman & Justin

Do you want to be in charge of energy production of a cell? Are you very strong and have a double membrane? At CELL Inc. we train millions of organelles to work together with other organelles and make the cell work. We are looking for organelles that can make energy. You need to be able to process glucose and make ATP. Your body has to be rod shaped and you need your own DNA. If you've copied your DNA before, this can be your chance to do it again. Do your friends call you "the powerhouse"? If they do, this job can be yours! We need 1000 – 2000 of you guys so if you think you meet the requirements call 1800- CELL-123 or e-mail us at organellesearch@CELLinc.org. If you are really desperate for a job, you may drop by our organelle resources (OR) office and we'll see what we can do about it. Our address is at 123 Cell Avenue, Shunyi district, Beijing, China. Work hours are 24/7. Your basic pay rate is a free shelter in your cell and unlimited compensation!! If you're interested, just contact us.

Cell Want Ad

By Paul & Vincent

Are you good at being a leader and instructor? Have some experience of being a manager? Are you good at reading and de-coding DNA? If so, then this is the job for you! Cellular Industries is looking for someone with these qualities. It would be nice to have someone that is very organized can store lots of files for carrying out orders. But don't worry about being assassinated! You will have your own body guards that will only let your special assistants go in and out of your room. Anything that looks suspicious will not be let in and sent to the ribosome's for community work for 15 years sentence helping make proteins. Your pay can be negotiable when you sign up, we start off with 29 proteins an hour. If you are interested, then call 1-800-234-565-cell-industries-123-456 or contact cellindustries@CellIndustries.cell. For more information, go to our website

HELP WANTED!

By: Nelson & Cindy

Do you know how to create a masterpiece? Are you 200 angstroms in diameter and composed of 65% RNA and 35% protein? If you are, this job is great for you. You have to be a good craftsman and joyfully create a bead of protein. You need to know the proper materials in order to magically conjure up an extravagant, out of the ordinary, outstanding bead. You need to have the similar DNA as the other craftsmen of the cell. You have to be a good team worker since there are millions of other craftsmen in the workshop. You need to be sticky in order to stick to the endoplasmic reticulum and be able to swim, because once in a while you will be floating around in the cytoplasm. You need to collect enough beads to make a wonderful bracelet of protein for your boss. If you are interested in this job, please call 1-800-RNA-TODAY. If you do not have access to a phone, email us at rnatoday@cells.com We will negotiate your salary when you call or email us. You will get a big bowl of proteins for every meal. CONTACT US TODAY! Our office is located at 34th Avenue, Cytoplasm Road, Manhattan, New York, USA.

HELP WANTED!!!

BY Matthew & Gloria

Do you like storing stuff? Do you like to carry water for plants? Are you big or tiny? Are you bored of living with your mom but don't have the money to buy your own house? Come join thecellplantanimal.job.com. If you're big and want to join the plant division, every day you get to store water and earn career experience. You must also be able to support the plant. You can get the job at the animal division easily as long as you aren't a loner and you have to be able to work all day, store indigestible waste and not complain for the whole time. If you want to join the amoeba division, you only have to digest food for amoeba. If you are young and looking for a part time job here, you must also have many friends just like you to join you. If you're scared of this job, don't worry you will be protected by membrane and everyone cooperates with each other. Lunch is served! We will supply you with delicious proteins and fabulous energy! Call 13132435460 if want to join email at imnotaloner@cellplant.com
